

GTP-battery voltage meter

-----Your faithful guard of Lithium battery!

“3 in 1”

- For the real time display of the RC model battery voltage (1-6S LiFe/LiPo/Li-ion). The first one in the market that can check LiFe battery! Suitable for both airplane and helicopter including large-scale plane, helicopter 500, 600.....
- Record the lowest voltage of each cell during flight and you can also read it after flight.
- Set up the low voltage alarm while flying. LiFe/LiPo/Li-ion battery range can be also adjusted.

Easy to read and compare----- Show each cell and total voltage at the same time on the screen.

Keep your battery far away from danger----- Record the lowest voltage of each cell while flying, and you can also read the record after flight. This is very important and convenient for you to check the battery and assure the battery's health.

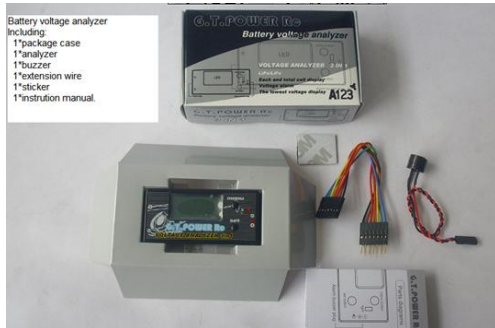

Avoid over discharge. Extend your battery's life----- Set up the range of LiPo/ LiFe/Li-ion voltage alarm . If any cell in the battery pack is lower than the value you set, the buzzer will alert you and the light will flash.

(The range of the alarm voltage of LiPo is 3.0-3.8V,
the range of the alarm voltage of LiFe is 2.6-3.4V)

Product list:

We also prepare one extension wire as a choice for you in the package. If you need more, please order from us.
